Versar unifies its global data tracking and reporting thanks to Xoriant's expertise and Microsoft solutions

"Power BI allows Versar teams to stop plodding through data – business leaders now have up-to-date analytics and spend less time cobbling together spreadsheets."

Gabe Guglielmo, CIO, Versar Inc.

Highlights

Versar and Xoriant partnered to elevate Versar's data capturing and processing

Xoriant's X·CELERATE Insights provides Versar with up-to-date analytics

Versar business leaders benefit from enhanced reporting and insight generation

About partner

Founded more than 30 years ago, Xoriant is a tech leader and execution partner for companies that create technology products and enterprises that use those products to implement business solutions.

The challenge

Versar is a program management company delivering world-class technical and management support to governments and companies around the world. Versar sought to automate its data capturing, processing, and reporting capabilities to save time, maximize vital resources, and offer more effective reports for building business cases.

The solution

Versar contacted Xoriant to implement its X·CELERATE Insights analytics solution. Xoriant identified the data sources, frequency, and data loading requirements for each data source entity. This enabled Xoriant to design semantic models for Power BI reports and dashboards to simplify data relationships.

The results

- **Xoriant's solution includes Azure Synapse Analytics** with ETL pipelines and semantic models for Power BI reports to effectively move, manage, and report data.

- **Xoriant's unification of data pipelines and data processing** automates and optimizes Versar's proposal workload planning processes by delivering clear, concise, and meaningful reporting.

- **Xoriant's solution empowers Versar's leaders** by providing a clearer picture of the organization to drive informed decision-making.
