EAI FOR AN ENTERPRISE CLASS SOFTWARE SOLUTIONS COMPANY

CLIENT OVERVIEW

The client is a global provider of enterprise-class software solutions that support the entire information lifecycle - managing and protecting data, assuring the availability of applications and providing immediate access to information. The client engages in the development, marketing, and support of storage software products and services worldwide. Its solutions protect and manage information, assure the availability of applications, and provide access to business-critical information in distributed open systems environments. Their software products and services are used in information protection and recovery, hierarchal storage management, automated availability, email, and content management purposes.

KEY REQUIREMENTS

- To enable customers to interact with the company on-line
- Integrate and automate the incumbent business processes and information required to providing these services over the web
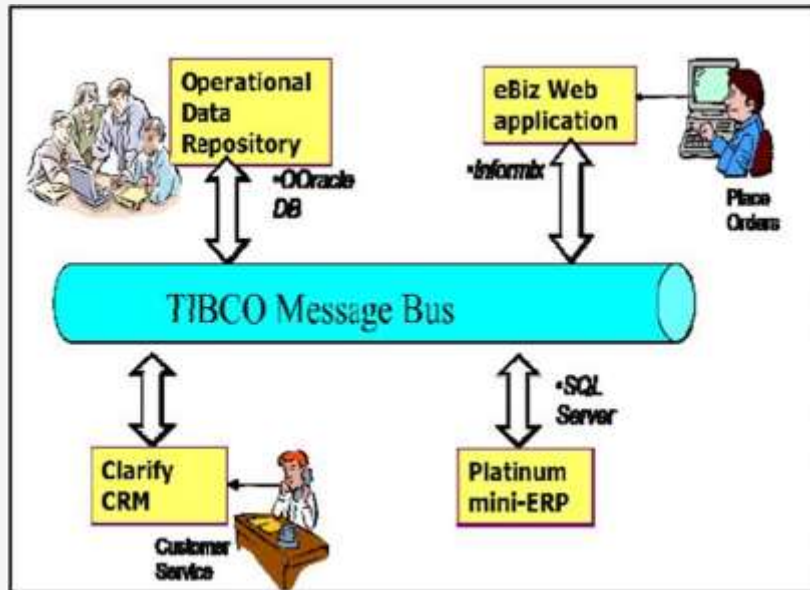

KEY CONTRIBUTIONS

- Xoriant was responsible for building a series of adapters, one for each system, which required integration.
- Standard vendor adapter were used where ever available. Xoriant's role is architecting and implementing the solution using TIBCO's middleware products.
- Xoriant was responsible for Project Management and implementation.
- The TIBCO integration is based on TIB/Active Enterprise suite of products – Rendezvous, the core message bus and several adapters for different databases and the Clarify system. Information is exchanged using TIBCO's subject based publish and subscribe.
- The integrated enterprise will allow internet users to place orders and check order statuses over the web seamlessly as a manual order processing is done. Integrating Clarify will also help build stronger customer relationships.

KEY BENEFITS

- The integrated enterprise will allow internet users to place orders and check order statuses over the web seamlessly as a manual order processing is done.

- It also will allow the client to communicate and transfer order information to customers; data moves efficiently and reliably among systems and beyond the enterprise.

- Proven TIBCO technology helps the client strengthen its existing business relationships and create new opportunities.
